Subject Fw More questions on Kalamazoo

Wendy,

Here are several additional questions from Sen Levin's office. This brings the total to 9. I just got off the phone with Alice Yates (Senator's DC office) and she asked that we provide responses to questions as soon as we can and not wait until we can provide one response to all the questions. She also mentioned that the Senator is personally interested in this issue, as he has discussed it with some constituents. She said that they appreciate our efforts to communicate with the City/community and I told her that the issue has top level attention.

Subject More questions on Kalamazoo

A few more questions:

1. The city was told that disposing the PCD-contaminated sediments at a TSCA-permitted facility in the Detroit area would cost about \$14 million more. Could we get the budget showing how the \$14 million was calculated?
2. Was a section 404 dredging permit required under the Clean Water Act?
3. Was an Environmental Impact Statement developed? (If so, could we get a copy of it?)
4. Is there a timeline for when the dredging is set to begin and the waste to start moving to disposal?

Thanks much!
-alice
